**2.3 – Brainstorming:** Brainstorming The brainstorming part of **“Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau”** was really helpful. We got to think of lots of ideas and make a plan for the project. We talked about how to look at UNESCO World Heritage Sites and find things in the data. We wanted to know where these sites are in countries and regions. We also wanted to learn about the kinds of sites like Cultural, Natural and Mixed Heritage Sites.

We found some information that we needed like the name of the site the country it is, in the region what kind of site it is and when it was added to the list. We thought about how to show this information in a way that's easy to understand. We decided to use maps, bar charts, pie charts, dashboards and stories to make it interactive and fun. This way people can look at the data. Understand it easily.

Brainstorming helped us figure out what we wanted to do with the project. We decided what questions we wanted to answer and how we were going to analyze the data. It gave us an idea of how to make the Tableau dashboards and stories. Overall brainstorming was a part of planning the project. It helped us make an analysis of UNESCO World Heritage Sites that is interesting and easy to understand. We learned a lot about Heritage Treasures. How to use Tableau to show the information.
