3.2 – Solution Requirement

The proposed solution for “Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites (2019)” is supposed to be a cool tool that helps people explore UNESCO World Heritage Site data in a fun way using Tableau. Heritage Treasures solution should be able to take in and process UNESCO datasets that have lots of information like site names and countries and regions and the years they were inscribed and if they are in danger or not.

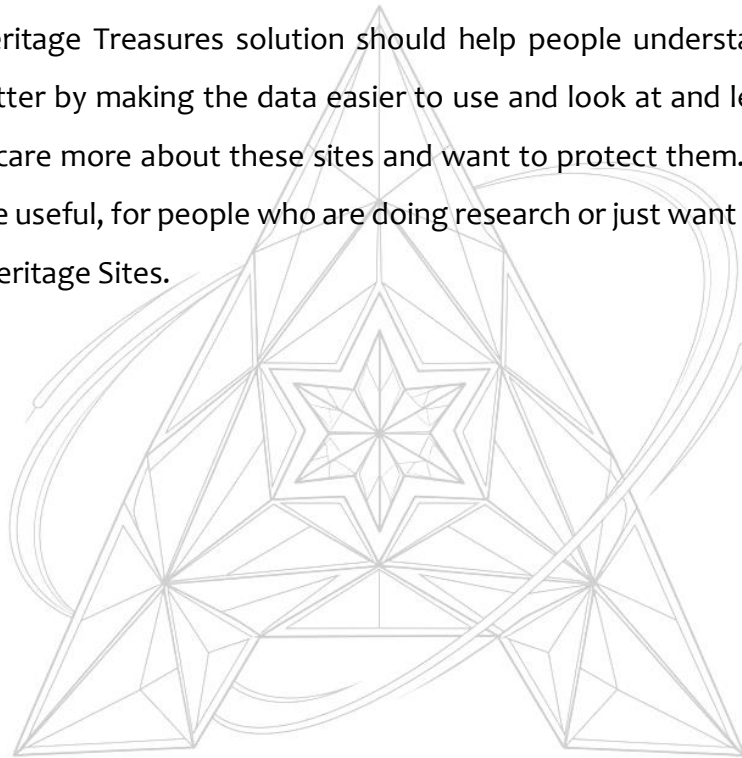

This system should make some interactive dashboards that let users look at heritage site information in different ways. It should have a Treemap that shows how many heritage sites are in each country so users can see which countries have the most UNESCO World Heritage Sites. There should also be a Pie Chart that shows what percentage of heritage sites are in danger and what percentage are not in danger so users can see how these sites are doing now.

Heritage Treasures solution should also have a Line Chart that helps users see how many heritage sites were inscribed in each region over the years. This will help users see if there are any patterns in how heritage sites are being conserved in different regions. Users should be able to use filters to look at the data in ways like by country or region or category or the year the site was inscribed.

Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites In Tableau

In addition to all these visualizations Heritage Treasures solution should be able to put these Tableau dashboards on a website so users can get to them easily on the web. These dashboards should be easy to use and work well on devices and show users the right information based on the UNESCO dataset.

Overall Heritage Treasures solution should help people understand UNESCO World Heritage Sites better by making the data easier to use and look at and learn from. It should also help people care more about these sites and want to protect them. Heritage Treasures solution should be useful, for people who are doing research or just want to learn more about UNESCO World Heritage Sites.
