

the Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau

TEAM ID	SWTID-2026-2399
PROJECT TITLE	the Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage sites in tableau
MAX MARKS	1 MARK

5.4 – Team Management Tool for Agile Planning (Jira): For the Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau project Jira was used to manage the team and plan the work. This meant the team could organize all the things they had to do and keep track of how they were doing. Jira helped the team break down the project into jobs and give each person a task based on what they were good at and what they could do.

The team had a lot of work to do on this project. They had to collect data get the data ready make dashboards come up with stories put the website together write documents test everything and then put it all online. Jira was used to plan all these tasks and keep an eye on them. Each task had a deadline. The team could see where they were with each one. If it was something to do if they were working on it or if it was finished. This way the team could see how their work was going. Make sure they finished everything on time.

Jira also helped the team work together. It gave them one place to go to see how everything was going and to talk to each other. The team would regularly check in to see how things were going and fix any problems that came up. By using Jira the team was able to work together get more done and finish the project on time. Overall Jira was a help, in making sure the project was managed well and that the Heritage Treasures project was completed smoothly. The team used Jira for the Heritage Treasures project. It really helped them get everything done.
