

CHAPTER – VI

PROJECT DEVELOPMENT

6.1 – Pre-Requisites: Tableau is a useful tool for making sense of data and it helps us turn a bunch of numbers into easy-to-understand charts and reports. It is used by a lot of businesses and researchers to make sense of information and make better decisions.

Installation

Let's get Tableau on our computers.

Step 1: Tableau Website First we need to go to the Tableau website and find the products section.

Products

Step 2: Tableau Products

Tableau has a lot of options for using its features. These include:

- * Tableau Cloud: this is a cloud-based platform that's easy to use and does not require a lot of technical knowledge.
- * Tableau Server: this is a platform that we can host ourselves either on our servers or in the cloud.

the Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau

* Tableau Desktop: this is the version that we will be using it is a tool for creating visualizations and dashboards.

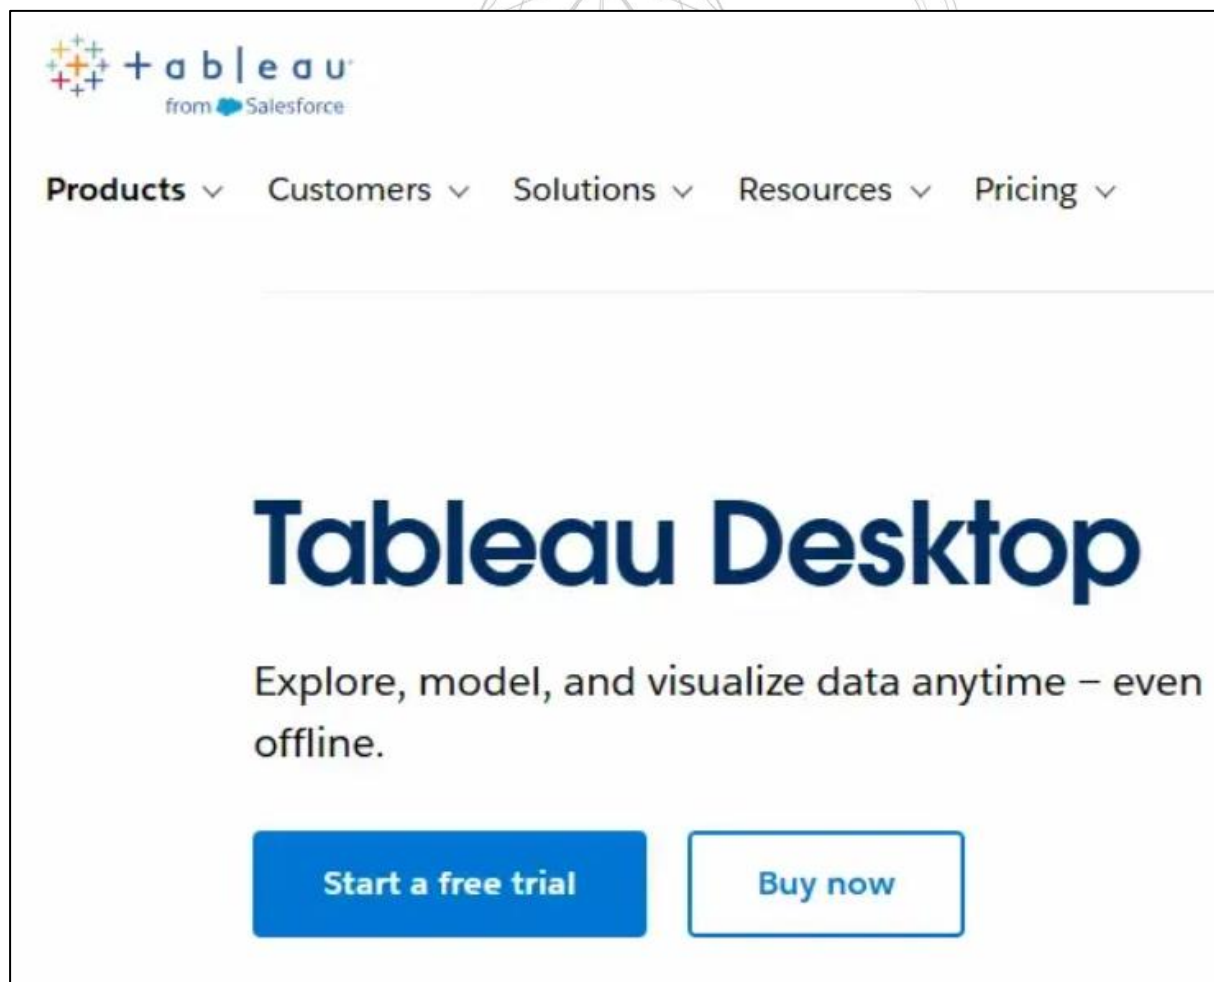

* Tableau Next: this is a platform that uses artificial intelligence to help us get insights faster.

* Other Products: there are also tools like Tableau Prep for cleaning data Tableau Public for sharing visualizations and Tableau Mobile, for accessing Tableau on our phones.

We will be downloading the Tableau Desktop version.

Step 3: Select the Tableau Desktop

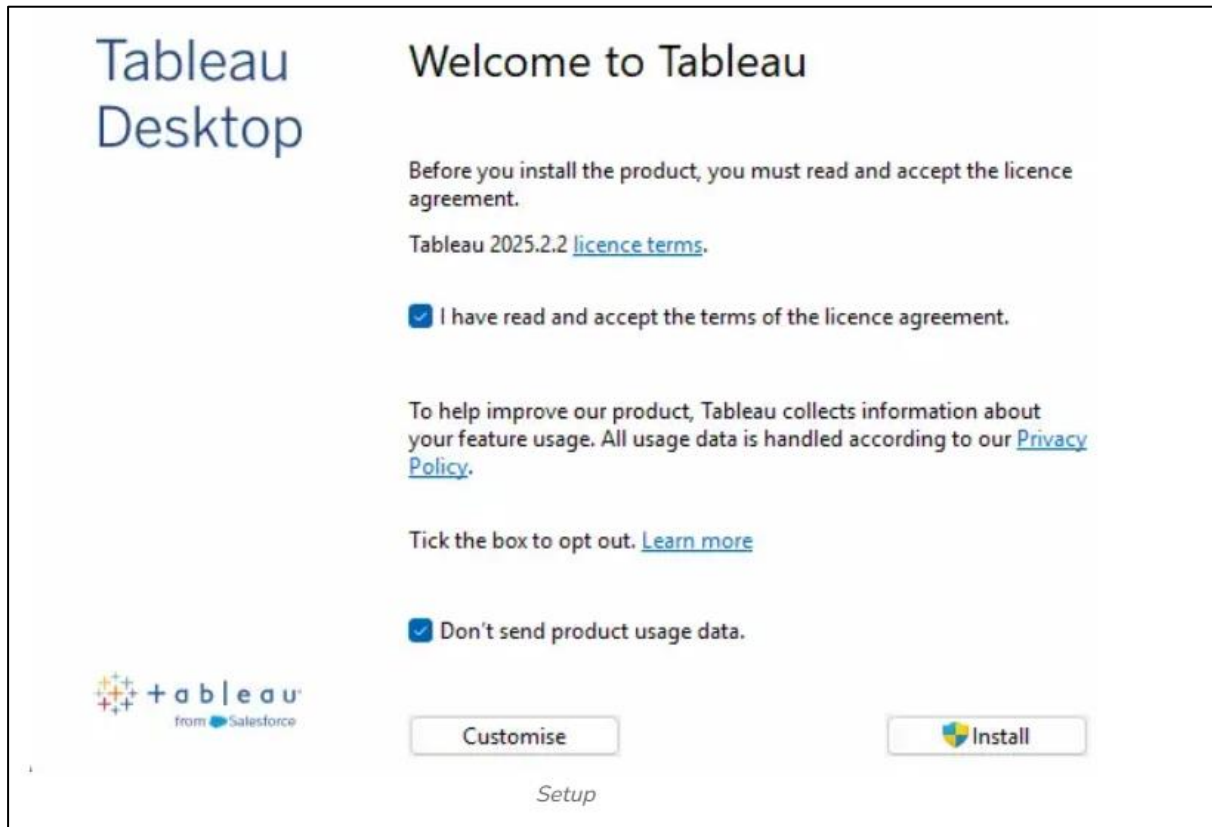

Now we need to select the Tableau Desktop option. Then we will have a couple of choices to make.

Step 4: Installation

After we make our selection the setup file will download. Then we need to install it. We do this by opening the setup file and following the instructions.
