CHAPTER – VII

FUNCTIONAL AND PERFORMANCE TESTING

7.1 – Performance Testing & Functional Testing: Performance Testing & Functional Testing

Performance Testing

We did performance testing to make sure the Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau project works well when used normally.

The Tableau dashboards, website pages and embedded visualizations were checked to see how fast they loaded how they responded and if navigation was smooth.

The dashboards loaded fine without taking long filters worked quickly and the website worked steadily across different pages. We also tested the system on web browsers to make sure it worked well and was easy to use everywhere.

Functional Testing

We did test to check if every part of the project worked as it should.

The connection, between Tableau and the dataset was checked to make sure the UNESCO World Heritage Site information was shown correctly.

All worksheets, dashboards, stories, filters and interactive parts were tested to make sure they worked right.

We also checked website navigation, embedded Tableau dashboards, links and how users interact with the site. The testing showed that all project parts worked correctly making visualizations and giving users a smooth experience without big problems.
