

Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau

CHAPTER -IX

ADVANTAGES& DISADVANTAGES

- 1. INTERESTING AND ENGAGING TOPIC:** UNESCO World Heritage Sites are famous over the world and they are really important for our culture and nature. People from over the world no matter how old they are or where they come from think these sites are amazing. The topic of UNESCO World Heritage Sites naturally makes people curious. It is easy to talk about the dashboard with anyone. Many people have visited these sites or want to visit them so they feel connected to UNESCO World Heritage Sites.
- 2. CLEAR AND WELL-DEFINED GOAL:** The goal of this project is clear: we want to do an analysis of UNESCO World Heritage Sites using Tableau. This makes it easy to plan what we need to do. When we need to do it. We know what we want to achieve so we do not get confused or waste time. It is easy to measure if we are successful because we can check if the dashboard does what we want it to do.
- 3. PERFECT FOR GEOSPATIAL VISUALIZATION:** The data we have includes information about the location of each site like the country, region, latitude and longitude. Tableau is great for making maps so we can use it to show where all the sites are in the world. We can use types of maps to show how the sites are spread out and what patterns we can see. Looking at data on a map is more interesting and easier to understand than just looking at numbers.
- 4. EXCELLENT PORTFOLIO-BUILDING OPPORTUNITY:** This project shows that we can do things in Tableau like connect to data prepare it and make calculations. It also shows that we can handle data and make interactive visualizations that are easy to use. The topic of UNESCO World Heritage Sites is interesting and beautiful. It makes our portfolio stand out. People who hire data analysts really like to see projects like this.

Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau

5. MULTIFACETED ANALYTICAL POTENTIAL: The data we have includes different things, like the year each site was added what type of site it is and if it is in danger.

This means we can do different types of analysis like:

- * Looking at trends: how many sites have been added over time.
- * Comparing things: which countries have the most heritage sites.
- * Looking at categories: how many cultural sites versus sites there are.
- * Assessing risk: which sites are in danger.

This keeps our analysis interesting and insightful. We do not get bored.

6. Enhances Data Storytelling Abilities: The data we have tells a story from historical sites to new ones or from safe sites to ones that are in danger. We can design the dashboard to take the user on a journey through this story. Telling stories with data is a skill in business intelligence because it helps us turn numbers into actions. This project helps us practice structuring data to tell a story.

7. HANDS-ON EXPERIENCE WITH REAL-WORLD DATA: We are using data from UNESCO, which is a well-known and trusted organization. Real data can be messy or incomplete so this project gives us experience in cleaning and preparing data. Working with data builds practical skills that we can use in our jobs as data analysts. Using data also makes our findings more trustworthy.

8. COST-. EASILY ACCESSIBLE: The data we are using is free and available to the public so we do not have to pay for it. Tableau Public, the tool we are using is also free. We do not need any equipment or expensive software so anyone can do this project. This means that students, freelancers and professionals can all work on this project without spending any money.
