

CHAPTER – XI

FUTURE SCOPE

11.1 - Future Scope: Future Scope

The Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau project has a lot of room to grow. We can make it better by adding things and making it easier to use. For example, we can update the information about UNESCO World Heritage Sites all the time. This way the Heritage Treasures project will have the information about these sites.

We can also make graphs and pictures to show how many people visit these sites how well they are taken care of and how they have changed over time. The Heritage Treasures website can be made better by adding ways to search for things comparing different countries and making it work well on phones. We can also add maps that people can interact with. These maps can have a lot of details about each site, like pictures and descriptions. This will make people want to use the Heritage Treasures project

The Heritage Treasures project can also be connected to sources of information that are always up to date. This way the graphs and pictures will always be current and accurate. We can also add features that let people tell us what they think download reports and look at the information, in detail. These changes will make the Heritage Treasures project more useful and fun for students, researchers, tourists and people who love things. The Heritage Treasures project will help people learn more about UNESCO World Heritage Sites. Why they are important.

Furthermore, future development can focus on integrating the project with Tableau Public updates, enabling dashboards and stories to refresh automatically whenever the source data changes. Improved website performance, enhanced security, faster loading speeds, and better compatibility across different browsers can also be implemented.
